

# CLIMATE VOTING DESIGNED FOR RESPONSIBLE INVESTORS

Time is running out to tackle climate change and mitigate your investment risks.

Despite consistent investor calls for Paris aligned targets and plans, company progress has been patchy and slow.

Even when faced with the urgency of the crisis and scale of the investment risks, standard climate proxy advice remains middle of the road.

PIRC is changing this by providing responsible investors with a new Carbon 1.5 proxy voting service that **makes your voice heard on climate.**

## About Carbon 1.5

✓ Specific focus on the world's largest emitters where investment risks are greatest

✓ Trusted proxy research into 1.5°C degrees aligned company targets covering all their emissions

✓ Proxy voting recommendations that hold directors to account for climate inaction

✓ Proxy voting recommendations that escalate action according to how short a company is of investor expectations on 1.5°C targets

If climate risk is to be confronted, then action is needed now. That is why our new voting service is designed to **escalate your stewardship activity on climate.** It is aligned to the needs and priorities of responsible investors. And is being delivered to protect the long-term returns of responsible investors against climate risk.
